Reflow Profile**■ Reflow Temp/Time****Notes:**

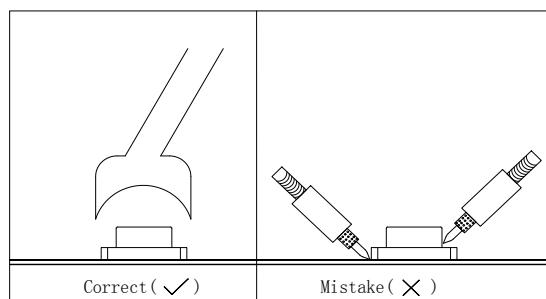

1. We recommend the reflow temperature 245°C ($\pm 5^\circ\text{C}$). the maximum soldering temperature should be limited to 260°C.
2. Don't cause stress to the epoxy resin while it is exposed to high temperature.
3. Number of reflow process shall be 2 times or less.

■ Soldering iron

Basic spec is ≤ 5 sec when 260°C. If temperature is higher, time should be shorter ($+10^\circ\text{C} \rightarrow -1$ sec). Power dissipation of iron should be smaller than 20W, and temperatures should be controllable .Surface temperature of the device should be under 230°C .

■ Rework

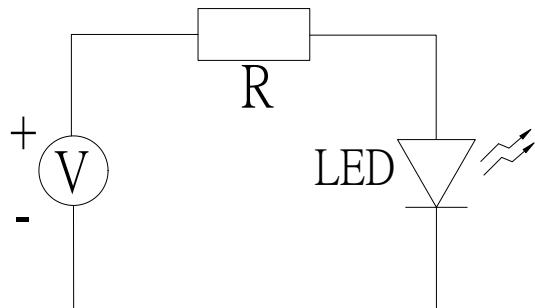

1. Customer must finish rework within 5 sec under 260°C.
2. The head of iron can not touch copper foil
3. Twin-head type is preferred.

- Avoid rubbing or scraping the resin by any object, during high temperature, for example reflow solder etc.

Test circuit and handling precautions

■ Test circuit

■ Handling precautions

1. Over-current-proof

Customer must apply resistors for protection; otherwise slight voltage shift will cause big current change (Burn out will happen).

2. Storage

2.1 It is recommended to store the products in the following conditions:

Humidity: 60% R.H. Max.

Temperature : 5°C~30°C(41°F~86°F)

2.2 Shelf life in sealed bag: 12 month at <5°C~30°C and <30% R.H. After the package is

Opened, the products should be used within a week or they should be keeping to stored at ≤ 20 R.H. with zip-lock sealed.

3. Baking

It is recommended to baking before soldering when the pack is unsealed after 72hrs. The Conditions are as

followings:

3.1 $70\pm3^\circ\text{C}$ x(12~24hrs) and <5%RH, taped reel type

3.2 $100\pm3^\circ\text{C}$ x(45min~1hr), bulk type

3.3 $130\pm3^\circ\text{C}$ x(15~30min), bulk type
